The details of manual summarizing process for contract attribute candidates

Limit: Constraints, such as the maximum amount per transaction and the maximum holdings for a single address.

Fees: Transaction costs, encompassing additional expenses and rates required to complete a transaction, such as gas fees, handling charges, and taxes.

Flag: Indicators, such as signals that specify whether the contract permits token exchanges or whether a particular address is whitelisted.

Address: On-chain addresses, comprising all state variables related to addresses, such as blacklisted addresses.

Asset: Assets, including the various types and amounts of assets owned by users or the contract.

Router: Router addresses, such as the addresses of router contracts that need to be invoked for asset exchanges.

Others: Other state variables.
